

Abstract

An airbag device includes an airbag and a retainer and is mounted to a motor-bicycle which is a motorcycle. The airbag is deployed and inflated in a rider protection area which is situated in front of a rider when the motor-bicycle collides at a location which is situated in front of the motor-bicycle. The retainer can accommodate the airbag. A second structural portion of the airbag is disposed outside the retainer and astride a central portion in a forward/backward direction, and is mounted to the front portion of a panel by mounting members.
